## DETAILED ACTION

### ***Specification***

1. The abstract of the disclosure is objected to because it contains claim language. Examiner suggest applicant to rewire abstract in a clear and narrative form and precise description of the invention. Correction is required. See MPEP § 608.01(b).

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

### ***Claim Objections***

Examiner suggests to makes the following changes in order to clarify the current invention and claim language.

2. Claim 1 is objected to because of the following informalities:
  - a) on line 5-9, please make changes as such: -- combining, for a given position, the M greatest values **each** selected from among K **samples** on each frequency having said **given** position, **generating combined values for each position** and keeping the greatest combined value and the corresponding position; and comparing the greatest

combined value with a threshold value, and if the greatest **combined** value is greater than the threshold value, the declaring the detection of the signal.

3. Claim 2 is objected to because of the following informalities: on line 4, please change symbol "R" to -- R --.

4. Claim 8 is objected to because of the following informalities:

a) on line 3-9, please make changes as such: -- several storage devices, **each of** the devices being adapted to memorizing the K greatest values for a **corresponding** given frequency as well as their **positions**; a combination device enabling the position-by-position combining of the K greatest values for all the frequency values **to generate several combined values** and the keeping of the greatest **combined** value; and a comparator receiving, firstly, the value of a threshold to be **compared** with and, secondly, the greatest **combined** value.

5. Claim 11 is objected to because of the following informalities: on line 1, please change "device" to -- method --.

6. Claim 12 is objected to because of the following informalities: please delete line 5.

Appropriate correction is required.

### **Conclusion**

7. This application is in condition for allowance except for the following formal matters:

See description above.
